

NANoREG

A common European approach to the regulatory testing of Nanomaterials / Seventh Framework Programme / 2012-2015

The apparently unlimited innovative and economic potential of manufactured or engineered nano materials (MNMs) stands in sharp contrast to our current understanding of MNM safety. This project will deliver results leading to a reduction in uncertainty by improving the applicability of common instruments and their ability to assess the risk of the MNMs under investigation. This will provide a focus for the development of further testing strategies as well as decision strategies and paradigms for decisions under (persistent) uncertainty, and longer-term risk governance strategies. Safe production and use of nanomaterials, contributing to consumer confidence is the ultimate goal.
